

Euro canister

EU-KA10AdBlue

	EU-KA10AdBlue
Nominal filling volume	10.000 ml
D x H	230 x 188 x 330 mm
Weight	440 g
UN approved	—
Stackable	Yes
Opening	DIN45
Packaging unit	120 items

WOLF PLASTICS:
We never lose sight
of our world.

Good for the environment

AdBlue is an additive for diesel vehicles. It is produced from urea which processes exhaust gases and thus achieves a reduction in nitrogen oxide. ISO standards demand special storage and logistics procedures for this substance (AUS 32 aqueous urea solution). It is no surprise, then that WOLF PLASTICS has had the foresight to produce a canister specially designed to be filled with this specific substances.
